

Monitoring Requirements Not Met for PINEVILLE MUNICIPAL WATER, WV3305517

Our water system violated drinking water monitoring requirements within the past year(s). Even though these were not emergencies, you, as our customers, have a right to know what happened and what we did to correct the situation.

We are required to monitor your drinking water on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During periods listed in the table below, we did not monitor or test as required and therefore cannot be sure of the quality of our drinking water during that time. Also, test results show that our system exceeded the standard or maximum contaminant level (MCL) for Total Trihalomethanes and Haloacetic Acids.

What should I do?

You do not need to use an alternative (e.g. bottled) water supply. However, if you have specific health concerns, it is recommended that you consult with your doctor.

What does this mean?

This is not an immediate risk. If it had been, you would have been notified immediately. However, some people who drink water containing Total Trihalomethanes (TTHM) and/or Haloacetic Acids (HAA5) in excess of the MCL over many years may have an increased risk of getting cancer.

The table below lists the monitoring we did not conduct, the type of samples we are supposed to take, and when the samples should have been taken.
